

# GOLF

**Advantage Sports & Leisure can provide the ultimate in high performance and low maintenance golf practice solutions.** Through continual research, development and testing by our product supplier SYNlawn, we are committed to producing the best, most realistic artificial putting surfaces on the market.

Using the latest state-of-the-art manufacturing technology and materials, our synthetic grass golf surfaces are developed to perform as closely as possible to professional grade natural golf grass for true ball-roll and realistic performance.

We can build a challenging course complete with varying gradients, chipping areas and sand bunkers.

Create the golf course of your dreams in your own backyard and practice your golf game anywhere anytime.

## Supergreen 23

The Supergreen 23 synthetic grass golf system is produced from texturised helix fibre blades with soft non-directional characteristics. With a finished height of 23mm, this product has the ability to absorb energy and dissipate impact from the ball landing, allowing it to check up and run naturally on the grass surface.

Supergreen 23 is a professional putting green surface suitable for resorts, retirement villages, practice centres, hotel and leisure facilities as well as private homes.

## Agility 23

The Agility 23 synthetic grass golf system is produced from texturised grass blades with heavy duty hybrid emulsion backing. With non-directional fibres Agility 23 provides a soft and realistic putting surface.

Agility 23 synthetic grass is an economical solution for backyard putting greens or for small commercial use.

Both Supergreen 23 and Agility 23 have an 8 year manufacturer warranty and are made in Australia.
